

B2B Lead Operations & Outreach Automation System

Workflow Automation Engineer
taoli2347@gmail.com | UTC+8

A real multi-workflow n8n system built for an export business - lead data processing, qualification, scheduled outreach, reply monitoring, and operational status tracking.

1,498

cleaned prospect records

50

lead / CRM / outreach fields

694

email outreach marked sent

579

WhatsApp outreach marked sent

WHAT THIS SYSTEM PROVES

Not a single workflow. A working operations stack.

- Multi-step business logic: filtering, merge logic, branching, and structured record updates.
- CRM-style state management across lead qualification, outreach status, and next-action logic.
- Scheduled Email and WhatsApp outreach with prior-send checks and record write-back.
- Reply monitoring using Gmail, HTTP/API calls, JavaScript transformations, loops, and record matching.
- Execution history and operational dataset evidence from a real operating workspace.

POSITIONING

Workflow Automation Engineer

Core strengths demonstrated in this portfolio:

n8n

JavaScript Code

HTTP / API

Gmail

Google Sheets

Conditional logic

Loops / Merge

Status tracking

Evidence shown here is based on workflows and execution history from the operating workspace. Prospect names, emails, phone numbers, addresses, and message content are excluded.

Core lead-cleaning workflow

Qualification before outreach

Prepare consistent fields before decision logic.

Apply business rules and reject or route invalid records.

Prevent duplicate processing and repeat outreach.

Segment the dataset into operational lead tiers.

Track lead status, outreach state, and next actions.

Tao Li | Workflow Automation Engineer | taoli2347@gmail.com | UTC+8

Multi-channel execution with feedback loops

Email and WhatsApp workflows handle scheduled sending, message-state checks, success/failure routing, and reply monitoring.

WhatsApp semi-automated outreach

Scheduled sending, customer selection, language routing, randomized messaging, HTTP/API requests, result checks, and status write-back.

Email automated outreach

Email normalization, duplicate-send checks, multilingual template routing, message delivery, success/failure handling, and operational updates.

WhatsApp reply monitoring

API-based chat retrieval, item looping, JavaScript transformation, reply detection, branching, and customer-record updates.

Email reply monitoring

Gmail message retrieval, JavaScript parsing, record matching/merge, and reply-status updates.

WHY THIS MATTERS

The workflow stack does not stop at message delivery. It keeps operational state, monitors responses, and writes results back into the working dataset so the next action can be decided from current state.

Scheduled execution history and engineering capabilities

Repeated successful runs show that the outreach workflows were not only designed, but operated on a schedule.

Email outreach - scheduled execution

Execution history shows successful scheduled runs at regular ~20-minute intervals.

WhatsApp outreach - schedule + API workflow

Execution history shows successful scheduled runs at regular ~30-minute intervals.

OPERATIONAL EVIDENCE

Current cleaned prospect records	1,498
Operational fields	50
WhatsApp-available records	755
Email outreach marked sent	694
WhatsApp outreach marked sent	579
Rows currently flagged duplicates	0
Lead tiers	A 152 / B 419 / C 526 / D 401

WHAT I CAN DELIVER

- Lead cleaning, normalization, filters, and duplicate controls.
- Lead scoring, CRM-style statuses, and next-action logic.
- HTTP Request API integration with success/failure routing.
- Scheduled Email / WhatsApp outreach with send-state checks.
- Execution debugging, field mapping, branching, loops, and merge fixes.
- Reply monitoring and operational status updates.
- Async-first written communication and clear handoff documentation.

SCOPE & HONESTY

I present only experience I can demonstrate and am comfortable completing a practical technical assessment when required.
